

How can I get The Moneytizer ads.txt file updated automatically?

The ads.txt file lists all the buyers allowed access to your inventory.

Sites must have ads.txt files to prevent ad fraud by ensuring only authorized sellers can sell their ad inventory.

Implementing ads.txt is **obligatory** starting from 2021 and aligns with industry standards enhancing the site's credibility and potentially increasing its ad revenue.

Step-by-Step Guide for ads.txt auto updates

Log in to Your Moneytizer Account:

Go to The Moneytizer website and log in to your publisher account.

Access the ads.txt Information:

Navigate to the section of the menu where you can find the ads.txt information. Pick the correct domain.

The screenshot displays the Moneytizer dashboard interface. On the left is a sidebar menu with categories: DASHBOARD, MY WEBSITES, MY REPORTS, MY PROFILE, PAYMENTS (MY INVOICES, REFERRAL PROGRAM), and SETUP (AD UNITS, ADS.TXT, CONSENT BANNER, WORDPRESS, FAQ). The 'ADS.TXT' option is highlighted. The main content area is titled 'Implement our ads.txt' and includes instructions on setting up the file. It features a video player with the title 'Set-up our Ads.txt - English TUTORIAL' and a 'SET-UP ADS.TXT' button. To the right of the video, there are two tabs: 'AUTOMATIC' (selected) and 'MANUAL'. Below the tabs are buttons for 'Download the PHP file' and 'Download the user guide'. An 'IMPORTANT:' section lists two bullet points about automatic integration. At the bottom right is a 'VERIFY INTEGRATION' button. Red arrows point to the 'Choose site' dropdown in the top right and the 'AUTOMATIC' tab.

Download the ads_tm.php file required for integration.

Implement our ads.txt

Setting up this file is essential to start monetizing your site with the Moneytizer.

The use of ads.txt is mandatory. Advertisers will not buy from domains whose ads.txt files do not contain the correct information.

AUTOMATIC

MANUAL

Download the PHP file

[Download the user guide](#)

IMPORTANT:

- Automatic integration lets you skip updates to the ads.txt file.
- If you work with other advertising agencies, the automatic integration will keep the lines of your other advertising partners.

VERIFY INTEGRATION

Upload the ads.txt File to Your Web Server:

Use an FTP client (like FileZilla), your web hosting control panel (like cPanel), or any other file management tool provided by your hosting service.

Example with the OVH interface:

In the OVH control panel, navigate to the “Web” section and select “Hosting” from the sidebar.

At the top of the window, click on “FTP-SSH” and retrieve the following information:
ftp server / Login / Password

Open the File Manager:

In the hosting dashboard, find and open the "File Manager"

In the FileZila.

To connect to your site, click on “File” then “Site managers”. At bottom of the window, click on “New site” and name your site as you wish.

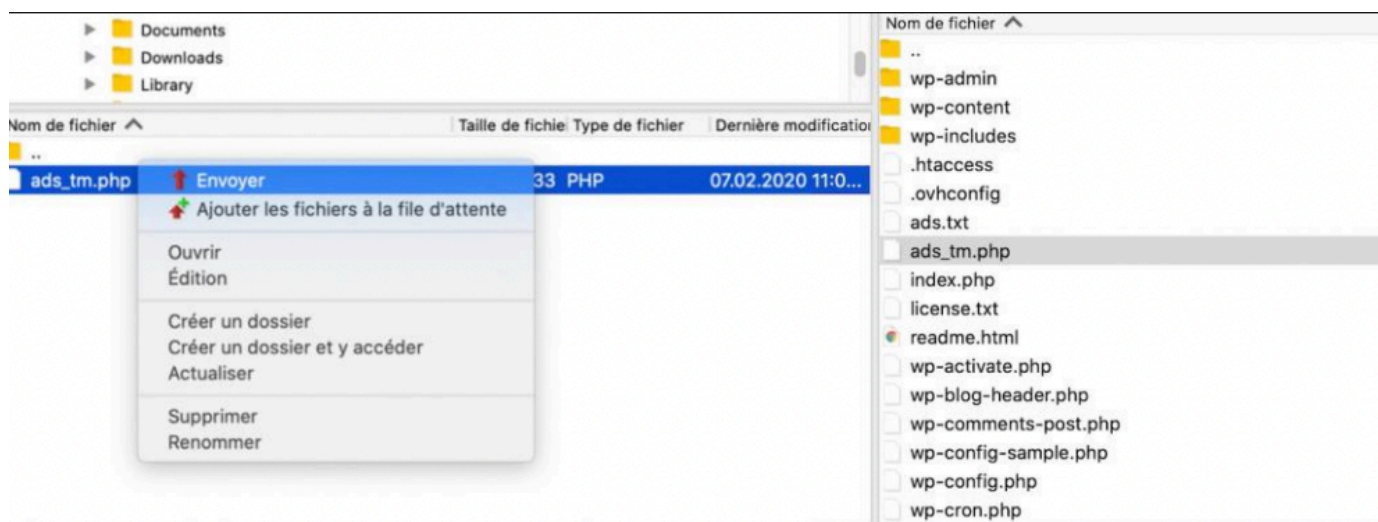

Fill in the following fields with the information you have collected from your host.

In the “Authentication type” drop-down menu, select “Normal”.

Host: corresponds to the server ip (FTP server). On OVH, it looks like this: ”
ftp.cluster...”

Identifier: corresponds to your host login

Password: your host password

Once all this has been filled in, click on “Connect”. Your site files now appear in the right-hand box of the Filezilla software. In the right-hand window, click on “www” (or equivalent for other hosts) to access the root of your site.

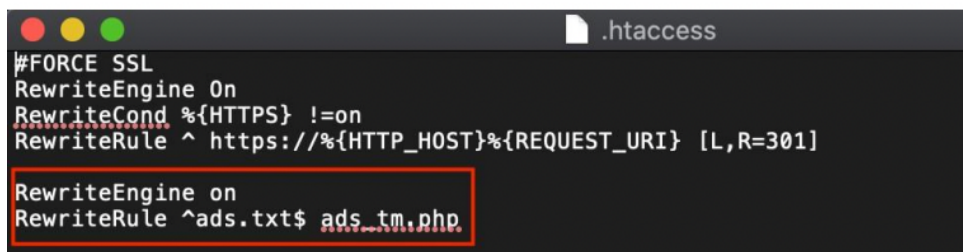

. In the window on the left (your computer), right-click on the ads.txt file you've downloaded and click on “Send”.

The file is transferred directly to the root of your site.

Then open the .htaccess file already on your server (right-hand column on Filezilla)

Copy and paste the following 2 lines at the beginning of your .htaccess file :

RewriteEngine on
RewriteRule ^ads.txt\$ ads_tm.php

```
#FORCE SSL
RewriteEngine On
RewriteCond %{HTTPS} !=on
RewriteRule ^ https://%{HTTP_HOST}%{REQUEST_URI} [L,R=301]

RewriteEngine on
RewriteRule ^ads.txt$ ads_tm.php
```

Save the changes

If you are using the nginx server, you need to add the following lines to the file **nginx.conf** file: **location = /ads.txt {rewrite ^(.*)\$ /ads_tm.php ;}**

Almost done!

To check that the file is installed on your site, simply type the following address in your browser [http\(s\)://www.nomdevotresite.com/ads.txt](http(s)://www.nomdevotresite.com/ads.txt) and then click on the click on the “Check your ads.txt file” button on your dashboard.

Intégration de notre ads.txt

La mise en place de ce fichier est essentielle pour commencer à monétiser votre site avec le Moneytizer.

L'utilisation de l'ads.txt est obligatoire. Les annonceurs n'achèteront sur les domaines avec le fichiers ads.txt incomplet.

Important!

If you are using **Cloudflare** protection, we will not be able to verify your file automatically, you will need to contact our Customer Support.

IMPORTANT: If you have already installed an ADS.TXT file with other advertising than The Moneytizer, just copy our lines and add them to the existing file.

If you're already working with GOOGLE ADSENSE, you need to include your Adsense line to our ads.txt file.

In general, it's a simple line like this: google.com, pub-XXXXXXXXXXXXXXXXXX, DIRECT, XXXXXXXXXXXXXXXXXXXX
